

Hydrogen Mobility – Zero Emission Valley : HYmpulsion selects FillnDrive digital solution for recharge payment and monitoring across its 20 stations

The French Region Auvergne-Rhone-Alpes is committed to become the leading sustainable region in Europe. This ambition fosters the initiative of Auvergne-Rhone-Alpes as the first European region on hydrogen development, with growing investment in zero emission mobilities. Therefore Zero Emission Valley, the H2 mobility project launched by Region Auvergne-Rhone-Alpes, marks an important step. In this project, HYmpulsion role is to create market conditions for green hydrogen with business application to mobility, ensuring construction and operation of hydrogen infrastructures, designing and dimensioning those infrastructures in order to address both light and heavy duty mobility requirements.

FillnDrive, the software editor that simplifies vehicle refuelling experience with alternative fuels, has been selected by HYmpulsion, and will handle customer transaction and infrastructure supervision across the 20 stations of the network. With HYmpulsion mobile application developed by FillnDrive, the drivers will benefit from live information on stations available, and will use the mobile phone to identify at the dispenser and launch refueling. In parallel, fleet managers and station contractors will get access to a SaaS digital supervision platform that will foster better monitoring and optimization of their daily operations.

Jean-Christian BEAUMONT, HYmpulsion – General Manager : « *The Zero Emission Valley program is unprecedented, with the ambition to deploy by 2023 in the region Auvergne Rhone Alpes a network of 20 stations delivering green hydrogen to 1200 duty vehicles. The project will involve a complete industrial value chain, which is specifically active in our territory. With this contract, we pass another important step towards our deployment. Handling transaction and supervision data is indeed a key trigger to foster empowerment and collaboration across project stakeholders. We know we can count on FillnDrive expertise to support us in this direction.* »

Bertrand JOUBERT, FillnDrive – General Manager : « *This contract is a recognition for our product, backed by several years of successful deployments in hydrogen mobility, serving professional fleets of duty vehicles, taxis, bus. We are grateful to HYmpulsion for the trust placed in our solution, and are very proud to contribute to the collaborative momentum linking players of the hydrogen value chain in Auvergne-Rhone-Alpes. Making daily interaction fluid across fleet managers, mobility operators and station contractors is what we are all about – and we are convinced that digitalizing recharge experience will be the key to success.* »

About HYmpulsion

HYmpulsion SAS purpose is to finance, build, deploy and operate green hydrogen production infrastructure, refuelling station network, and associated services, according to the principles stated in the Grant Agreement of the Zero Emission Valley project. This project, the largest one in France and the first of its kind in Europe, includes a set of 20 stations refuelling 1200 vehicles with green hydrogen. HYmpulsion, a public-private joint venture, is backed by Region Auvergne Rhone Alpes, ENGIE, Michelin , Banque des Territoires, and Credit Agricole.

About FillnDrive

FillnDrive is a software editor delivering SaaS solutions to simplify vehicle refuelling experience with alternative fuels (Hydrogen, Natural Gas...). Compatible with a vast majority of refuelling stations, FillnDrive mobile/SaaS solution makes driver experience more fluid with dedicated information and identification at the station, while providing each stakeholder of the refuelling transaction with digital tools to monitor and optimize daily operations : fleet managers, mobility service providers, station contractors. FillnDrive SAS was founded in 2018 and is an independent company owned by its management.
